CREMCO - Slip-On Couplings

6200 Principale - Sainte-Croix - Quebec G0S-2H0

Date	
Project	
Engineer	
Mechanical Contractor	

Certifications & Standards:

Certified to CSA B602

Material Specifications:

Clamp: Type 301 AISI stainless steel

Screw: Type 301 AISI stainless steel

Gasket: (Santoprene) 101-87

Cremco Slip-On Couplings:

The CREMCO Slip-On Couplings are manufactured in the USA for Bibby-Ste-Croix by its sister company Anaco. The CREMCO Slip-On coupling joins various types of piping materials and diameters for a drain, waste and vent (DWV) system.

Simplified Design:

Rigid Santoprene gaskets eliminate the need for stainless steel shields. The CREMCO Slip-On Coupling does not require disassembly prior to assembly of the joint.

The CREMCO Slip-On Coupling does not require the gasket to be stretched over the pipe or fitting.

Installation Benefits:

The CREMCO Slip-On Coupling allows the plumbing contractor to:

- Rotate each clamp independently around the gasket in order to facilitate easy assembly.
- Apply either side of a coupling to a pipe or a fitting and to completely tighten to 60 inch-lbs. without affecting the opposite side of the coupling.
